Dark Skies

By Stephen Mines

Dark skies are important to the world. In cities that are lit up it is easier to get cancer! The animals get blind and crash into buildings then die. The flowers, trees, potatoes, cabbage, and radishes think it is always day.

People can make the sky dark! One way to make the sky dark is to use shielded light. Shielded light are lights that point down. Also you can use sensor lights. Sensor lights are lights that if you walk past them they will turn on. You only need lights where you need and just turn off the lights. The dark sky is important.

Dark Skies

By Caleb Hardy

Dark skies are very important to everyone on Planet Earth. Most of all the people who haven't seen the Milky Way. First of all, light wastes a bunch of fossil fuels and energy. Also, too much light can blind birds and make them crash into obstacles. Also, the light makes turtles think that the house light is the shimmer of the ocean. Also, artificial lights make it hard to see and study the stars for astronomers.

Here are some ways to bring the dark skies back. One way is to only put lights where you need them. Another way is to use sensor lights only. Another way is to use drapes so your light doesn't give other people bad sleep. The fourth way is to use a lot of candles. Help prevent light pollution!

Dark Skies

By:Aven Humphreys

Dark skies are important to Lake City. One reason, why dark skies are important is that the lights affect the growth of plants. Another reason, is that turtles are supposed to go to the sea, but instead they follow the man made light and don't make it to the sea. Also, birds get blinded and crash into obstacles. Most importantly, it increases cancer in light filled cities.

we can help keep our skies dark by using candles and not electric lights. Another way, we can help keep our skies dark by turning off lights when you leave a room. Shielded lights are important because they make the light go down and not up where it can pollute the sky. Dark skies are good to have.

Dark Skies

By Aleah Wampler

Dark skies are important. One reason is because I think that turtles go to the land and not to the ocean. Also, you can get cancer from the man-made lights. In dark skies birds can see to fly and not be blind. I think that dark skies are important.

There are many ways to make dark skies. One way to keep the sky dark is to use shielded lights to keep the light on the street. Also, turn lights off that you are not using. You can also use a night light instead of a big light to keep the sky dark. Dark skies are important.

Dark Skies

By Rhys Phillimore

Dark skies are very necessary for everyone on planet Earth. One reason is artificial lights can affect plant growth. Also, the light can cause health concerns. For example, studies have shown cancer levels increase in light polluted cities. Drivers can crash by being blinded by artificial light. Most of all, birds can crash and get injured or even die when blinded by artificial lights. Lights are also creating pollution by using fossil fuels. Man-made light is making it hard for astronomers to study space.

There are many ways to make skies dark. One way is you can use sensor lights that only turn on when you need them. You can also turn off electronics that produce light. Finally, you can use shielded lights that point downward.

Help the dark skies and be a hero!

Dark Skies

By Labron Wampler

Dark skies are very important. Some people are scared of the dark, and turn on lights, but that wastes energy. Also, lights are a big problem for turtles. Cities have lots of light and turtles follow the moon light. The city lights are so bright that the turtles follow the city lights!!! But that's not all! Astronomers can't study the sky when it is lit up. That's sad because they won't get money for their job. Some people haven't even seen the milky way. Our dark skies are very important to you and I.

There are many ways to get dark skies. One way to get a dark sky is to use a sensor. When something gets close enough the sensor lights turn on. Then after like three to four minutes they will turn off. Another way to get a dark sky is to turn off all your lights when not in use. Last but not least, is to get a shielded light for each outdoor light and put them where they are only needed. If we did this we could see all the stars.

Dark Skies

By Cora Kaminski

Dark skies are important. One way dark skies are important is because the lights can kill turtles on the beach. They follow the man-made lights instead of the moon. The second problem is that lights can cause health problems. For example, man-made lights can cause more chances of cancer. The last example I have is that it's hard to sleep because of all the lights.

We can help make skies dark again. One way you can help is that you can put up shielded lights. Another way you can help is that you can put up motion sensor lights. The last way you can help is that you can put up shades that make no light shine out of the window. Dark skies make our world beautiful.

Dark Skies

By: Landon Rhodes

Dark skies are important to the Earth. Lights can kill turtles because the lights are brighter than the moon. Turtles are following the lights onto land, instead of following the moonlight to the ocean. Bright lights can make people wake up and not sleep well. Man made lights can make you really sick. They increase your chance of cancer.

Everyone can do their part to keep the skies dark. We can use fully shielded lights. Fully shielded lights keep the light shining down. We can use candles so we don't waste fossil fuels. We can use blinds to keep the lights in the house. Let's keep the dark skies dark!

Dark Skies

By: Dax Elkins

Dark skies are important. If we don't have dark skies birds will get hurt. For example, birds will get blinded. Lights at night confuse turtles. Turtles follow the city lights and not the moonlight. Man made lights make plants grow wrong.

We can work together to keep our skies dark. One way is you can use fully shielded lights. They keep the lights shining down. You can use candles to light up a room. You can turn electronics off when you are not using them. Dark skies are very important.

Dark Skies

By Arvid Piltingsrud

Dark skies are vivid to all of us. Why? One reason is health concerns. People dwelling in illuminated cities have a higher risk of developing cancer. Then there are the plants. Their growth cycle is disturbed by artificial lights all around them. Most important, the animals are dying. Turtles follow a beachhouse's light because they think it is the moonlight while migrating birds get blinded because of illuminated buildings.

You can help make skies dark too. One thing you can do is use night lights. Night lights create less pollution unlike normal lights. Another thing you can do is use reading lights. They light up only where you need it. You can also use curtains. Simply just slide them over your window. Turn lights off and keep the sky dark.

Dark Skies

By Katie Howell

Dark skies are very important. The first reason dark skies are important is that turtles need moonlight to go back to the sea. The man made lights lead them in the wrong direction. The second reason dark skies are important is that birds can't see in the light so they crash! For example birds can't see in the light so they crash into trees. The last reason dark skies are important is that we need sleep. When it is light you can't sleep.

There are many ways to make our skies dark. The first reason dark skies are important is that you can use small night lights. For example you can use small night lights instead of a big light so you can get to the bathroom safely. The second reason to keep our skies dark is that you can use window covering to keep your house or car dark. The last reason to keep our skies dark is that you can use candles instead of turning on your light. Candles can keep your room partly light. Dark skies make our world a better place.

Dark Skies

By Charlee Withrow

Dark skies are very important to planet Earth. Artificial lights can affect human sleep rhythms. They can also cause health concerns like cancer. Studies have shown that artificial lights can kill plants.

There are many ways to keep the skies dark. One way is to use shielded lights and sensor lights. You can use candles they do not use electricity. Curtains are used to keep the lights in the house. Dark skies make our world a better place.

Dark Skies

By: Charlie Kambish

Dark skies are important to us all. One reason is migrating or travelling birds can crash into lit buildings and turtles go to lit houses instead of the sea and can die. Also, lights that are pointed up are unnecessary so we should point them down because we need them facing down anyway. Plants also don't grow very well when lights are on. And another reason is it wastes energy which we need for other things.

There are some ways to keep skies dark. One way is to have motion sensor lights and timed lights to keep away light pollution. Also, we need to turn off unshielded and unneeded lights. Another reason is health concerns. For example: light pollution can cause higher rates of getting cancer. Dark skies are important to all of us on Earth.

Dark Skies

By Elijah Wuest

Dark skies are important to Earth. The plants don't like the fake light. The birds will get blinded by the lights. The turtles will die. They will go to the fake light.

Keep Dark skies

By Joseph K. Tubbs

Dark skies are important to Earth. One reason is birds can get blind and crash into buildings. Another reason is turtles follow the artificial lights instead of following the natural light.

But there are ways you can help. You can turn off lights when not needed. another way you can help is use shielded lights and put them only needed. Or you can use sensor lights. People can help keep dark skies.

1905/19

The night sky is pretty
we want to see the
stars. But, we can't do
because we don't
So, we should turn on
the lights.
So we can enjoy the
sky.
The night sky is pretty
we want to see the
stars. But, we can't do
because we don't
So, we should turn on
the lights.
So we can enjoy the
sky.

Sparkling Angels

Every
Night
above my
head, lie the
Stars tucking
me to bed,
and as I lie
there thinking,
I find the sparkling
angels singing their
song but in the morning
they are soon gone.
